

## e-Moments

Each LifeKnowledge lesson includes a variety of hands-on activities for use in the community, with the FFA Chapter and with student Supervised Agricultural Experiences (SAEs). In addition, many of the lessons include other classroom activities such as simulations, role playing, problem-solving group challenges and more.

A unique tool within LifeKnowledge is the “e-Moment” or “engaging” moment. By connecting to how student’s brains learn, we can maximize their capabilities to learn concepts, processes and information efficiently. e-Moments are moments when students become engaged, get connected and find personal meaning in the content they are learning.

Knowing that all brains are wired for visual, auditory, and kinesthetic capacity, the e-Moments are designed around one of these three modalities. Additionally, these e-Moments build on students’ natural intelligences – special, linguistic, interpersonal, musical, naturalistic, bodily-kinesthetic, intrapersonal and/or logical-mathematical.

These engaging strategies will create a dynamic classroom environment which may look and feel different than a “traditional” classroom. E-Moments challenge students to think, explore, and utilize their brains as they become responsible for their own learning and you become a facilitator of great learning activities.

[Here’s a sample of an e-Moment.](#)
