Suggested scoring:

every box must have something in it. Factors will either have the % or count or 0. 1 pt per box

Discounts will either be 0.0 or \$0.00 per bushel discounted. 1 pt per box

1 pt per box. In this case, there are 12 factors: TW, M, Ht. DKT, BCFM, Special Grades, Samples Grade factors, Other, Mycotoxins, YC, WC, and Corn Other Colors.

1 pt per discount box

24 pts total for factor/discount boxes

10 pts for grade line written as in past,

4 pts correct grade, 0 pts wrong

4pts correct class, 0 pts wrong

2 pts correct special grade 0 pts wrong

base price = 1pt

Final Price

It would be my intention to have 2 discount schedules. One with a higher base price but stiffer discounts and one with a lower base price but with lower discounts.

Students will have to calculate, based on their grade with Co. (A or B) will net the better price per bushel.

Best Co and final price correct = 15 pts

Next best Co. and final price correct = 10 pts

Final Price not correct = 0 pts
